

RENEWABLE SELECT

What it is

Renewable Select is a new retail electricity solution, available in Texas, where solar and wind energy is sourced from a specific facility and embedded seamlessly into your electricity supply. The result is a simplified electricity procurement solution for customers.

Benefits at a glance

SIMPLICITY

Renewable Select is a retail electricity product with a familiar structure, reducing the amount of time required to execute and manage the contract. No additional staffing or physical infrastructure is necessary.

FLEXIBILITY

Renewable Select can be tailored to meet your needs. Terms can be as short as five years, and the percent of supply you want to be sourced from renewable energy can be adjusted to help you meet your sustainability goals.

BUDGET MITIGATION

Renewable Select is designed to provide options that simplify procuring renewable energy while giving you all the same benefits and risk management features you're used to in a traditional energy supplier relationship.

COST-EFFECTIVENESS

Renewable Select is cost-competitive with the grid and requires no new infrastructure, making it one of the lowest true-cost renewable sources in the market.

THE RISE OF RENEWABLES

- New, utility-scaled solar and wind energy resources in Texas have become cost-competitive with grid power
- Buyers are contracting for clean energy to fix a portion of their operating costs
- Increased availability of utility-scale renewable energy now gives you options beyond on-site installation of clean energy generators like solar panels and wind turbines

Right plan. Right time. Right for business.

Declining renewable energy costs and increased traditional generation costs create a strategic window of opportunity for a competitively priced renewable solution. Renewable Select capitalizes on that window while adding an easy-to-implement aspect.

Let's get started.
